Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sulfide Electrolyte Membrane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of sulfide electrolyte membranes will reach 5.18 million square meters, with an average selling price of US\$250 per square meter. Sulfide electrolyte membranes are a key core material for solid-state batteries and form an important branch of the solid-state electrolyte system. Composed primarily of sulfides, they typically exhibit room-temperature ionic conductivity as high as 10^{-2} ~ 10^{-1} S/cm, approaching or even exceeding that of liquid electrolytes. They also possess excellent flexibility and compactibility, enabling close contact with electrodes at low pressures. This type of electrolyte membrane can significantly improve the safety (by eliminating flammable liquid electrolytes), energy density, and cycle life of solid-state batteries, making it a key area of research and development and industrialization for all-solid-state lithium batteries.

The global Sulfide Electrolyte Membrane market size was estimated at USD 1295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Sulfide Electrolyte Membrane market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
