This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sulfonic Acid Curing Agent for Furan Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sulfonic acid curing agent for furan resins is a chemical additive used to cure (harden) furan resins. It is usually a brownish-yellow or brownish transparent liquid. This curing agent, when added to the resin, enables it to cure rapidly. Sulfonic acid curing agent is one of the main components of resin sand. It is a mixture of toluenesulfonic acid and xylenesulfonic acid produced from raw materials such as toluene, xylene, and concentrated sulfuric acid through sulfonation, separation, and dehydration. It is widely used in the foundry industry to manufacture sand molds, offering advantages such as fast curing speed, simple process, and good sand mold collapse resistance. Global sales in 2024 were approximately 110,000 tons, with an average market price of approximately US\$2,000 per ton. The scale of single-line production capacity varies depending on the production process and investment scale. The industry's gross profit margin ranges from 20% to 35%.
