Abstracts

Sulfur-containing silanes are organosilicon compounds characterized by the presence of sulfur atoms within their molecular structure, typically in the form of mercapto, sulfide, or polysulfide functional groups bonded to a silicon atom; these chemicals act as coupling agents, primarily used to enhance the interfacial adhesion between inorganic materials (such as silica, glass, or minerals) and organic polymers (like rubber or plastics), thereby improving mechanical properties, durability, and performance in composite materials, especially in tire manufacturing, where they reduce rolling resistance and increase fuel efficiency.

The global Sulfur Containing Silane market size was estimated at USD 710.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
