Abstracts

Sulfur core wire is made by coating sulfur powder with steel strip. The sulfur-containing core wire contains water, which generates hydrogen gas when fed into the molten steel. Hydrogen gas in the molten steel can cause bubbles and pinholes on the surface of the product, affecting the material of sulfur-containing easy cutting steel. Therefore, when feeding the sulfur-containing core wire, argon should be blown at the bottom and mechanically transported, which can also reduce costs. Sulfur cored wire is beneficial for adjusting and controlling the sulfur content in molten steel or iron, and can obtain steel or iron products with appropriate sulfur content. Adding sulfur to the molten steel can be used to produce sulfur-containing free cutting steel, and the sulfur recovery rate can reach over 80%. Adding sulfur to stainless steel molten steel is beneficial for improving the cutting performance of steel products, changing the morphology of sulfide inclusions, and enhancing machinability.

The global Sulfur Cored Wire market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
