## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sulfur-free Odorants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Sulfur-free odorants production reached approximately 9,600 tons with an average global market price of around US\$ 9,800 per ton. Sulfur-free odorants are chemical compounds specifically developed to impart a detectable smell to otherwise odorless gases, such as natural gas or hydrogen, without relying on traditional sulfur-based substances like mercaptans or sulfides. Unlike conventional odorants, which can cause corrosion, environmental issues, and catalyst poisoning in industrial processes, sulfur-free odorants are designed to be environmentally friendly, less corrosive, and compatible with sensitive applications such as fuel cells, medical gases, and high-purity hydrogen systems. They provide the same safety function of leak detection while reducing negative impacts on equipment, air quality, and downstream processes.

The global Sulfur-free Odorants market size was estimated at USD 94.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Sulfur-free Odorants market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
