Abstracts

A Sulphate Removal Plant is designed to remove sulphates and other dissolved salts from seawater or process water, primarily in offshore oil and gas operations. This process helps mitigate scaling and souring issues in reservoirs caused by sulphate precipitation and the growth of sulphate-reducing bacteria. Typically employing membrane-based technologies such as nanofiltration or reverse osmosis, SRUs ensure the production of low-sulphate water suitable for injection into reservoirs during enhanced oil recovery processes. The unit enhances operational efficiency, extends equipment lifespan, and minimizes environmental impacts by reducing the risk of sulphate-induced complications.

The global Sulphate Removal Plant market size was estimated at USD 164.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
