Abstracts

Sulfur-Based Extreme Pressure (EP) Additives are chemical compounds used in lubricants to reduce wear and prevent metal-to-metal contact under high-pressure conditions. These additives work by reacting with metal surfaces at elevated temperatures to form a protective sulfide film, which minimizes friction and wear in gears, bearings, and other heavily loaded components. Commonly used in industrial gear oils, metalworking fluids, and automotive lubricants, sulfur-based EP additives are particularly effective in high-load applications where boundary lubrication occurs. However, they can cause corrosion in certain metals like yellow metals (e.g., copper and brass), necessitating the use of corrosion inhibitors in formulations.

The global Sulphur-Based Extreme Pressure Additives market size was estimated at USD 825.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
