The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sulphur Granulation System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Sulphur Granulation System production reached approximately 1,289 units, with an average global market price of around US\$ 450,000 per unit. The gross profit margin of major companies in the industry is between 35% ? 50%. Single-line production capacity is 20 ? 50 units/year. Sulphur Granulation System is an industrial equipment used to convert molten sulphur into uniform, solid granules through a process of forming, cooling, and solidification. These systems employ various technologies such as water prilling, drum granulation, or spouting processes to produce spherical sulphur particles with improved handling characteristics, reduced dust formation, and enhanced storage and transportation properties for applications in fertilizer production and chemical industries. The sulphur granulation system market is steadily growing, driven by increasing sulphur recovery from oil and gas refining operations and stringent environmental regulations regarding sulphur handling and transportation. The fertilizer industry remains the primary end-user, with growing demand for granular sulphur in agricultural applications. Key trends include the development of more energy-efficient systems, integration of automation for better process control, and emphasis on environmental compliance through dust reduction technologies. Manufacturers are focusing on developing customized solutions for specific client requirements while maintaining cost competitiveness in a moderately consolidated market landscape.

The global Sulphur Granulation System market size was estimated at USD 580.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80%

during the forecast period.
