Report Overview

Sunitinib is an oral, small-molecule multi-targeted receptor tyrosine kinase (RTK) inhibitor primarily used in oncology to treat advanced renal cell carcinoma (RCC), gastrointestinal stromal tumors (GIST), and pancreatic neuroendocrine tumors (pNET). It works by blocking several key signaling pathways involved in tumor growth, angiogenesis, and metastasis, including vascular endothelial growth factor receptors (VEGFRs), platelet-derived growth factor receptors (PDGFRs), and stem cell factor receptor (KIT). Marketed under the brand name Sutent by Pfizer, sunitinib has been a cornerstone in targeted cancer therapy since its FDA approval in 2006. The drug is typically prescribed as a first- or second-line treatment, depending on the cancer type and patient response, and is available in capsule form with a standardized dosing regimen. Its efficacy, combined with manageable side effects like fatigue and hypertension, has solidified its position in the oncology market, though competition from newer immunotherapies and biosimilars is reshaping its long-term demand. The global market for sunitinib is influenced by factors such as rising cancer incidence, advancements in personalized medicine, and pricing pressures from generic alternatives in regions where patents have expired.

The global Sunitinib Drug market size was estimated at USD 1179.55 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.72% during the forecast period.
