Abstracts

Sunlight readable TFT LCDs are a specialized category of liquid crystal displays engineered to maintain optimal visibility and performance under direct or intense ambient light conditions, such as outdoor or high-illumination indoor environments. These displays incorporate advanced technologies?such as high-brightness backlights (often exceeding 1,000 nits), anti-reflective coatings, optical bonding to reduce internal reflection and enhance contrast, and sometimes transfective layers that leverage ambient light to improve readability?to overcome the challenges of glare, washout, and reduced contrast that affect standard displays in bright settings. Designed for critical applications where reliability and clarity are non-negotiable, these screens are integral to industries such as aviation, marine navigation, automotive (especially for dashboards and infotainment systems in bright conditions), military equipment, industrial control systems, and outdoor digital signage, where user safety, operational efficiency, and information accuracy depend on uninterrupted visual access to displayed data.
