Abstracts

Super fine mica powder is a naturally derived, non-metallic mineral product processed into extremely fine particles, typically ranging from 10 to 150 microns, and is characterized by its shimmering, pearlescent, or glittering visual effect due to its layered silicate structure and light-reflecting properties; it is widely utilized across cosmetics (as a natural glitter or filler in foundations, eyeshadows, and lipsticks), paints and coatings (to enhance durability and add aesthetic sparkle), plastics (for improving surface finish and UV resistance), construction materials (such as textured paints and joint compounds), and even niche applications like crafts and automotive finishes, where its inertness, thermal stability, and ability to improve product slip and barrier properties are highly valued.
