Report Overview

Ultrafine armored thermocouples are armored thermocouples with very fine wires, designed for precise temperature measurements in confined or delicate environments. The armor is usually made of high temperature and corrosion resistant materials, such as stainless steel or nickel alloys. The armor provides additional mechanical protection to prevent the thermocouple from physical damage or environmental influences during use. These thermocouples have high sensitivity and accuracy, making them ideal for applications that require fine temperature control, such as scientific research or high-precision manufacturing. This report studies ultrafine armored thermocouples with an outer diameter of 2 mm or less.
