Abstracts

The global electrolytic copper foil market witnesses huge potential growth opportunities in the past few years. Electrolytic copper foils are utilized for low-power and high-energy applications including Li-ion batteries for cell phones, laptops, and other consumer electronics. These foils are employed as negative electrode current collectors in Li-ion batteries. Thus, increase in growth in the demand for laptops and smartphones is anticipated to drive the global electrolytic copper foil market. In addition, growing applications of electrolytic copper foils in printed circuit board (PCB) coupled with increase in importance of flexible electronics are some other key aspects anticipated to fuel the growth of the market. However, introduction of super conductors and rise in applications of semiconductors are some factors that hamper the overall market growth.

The global Super-thin Copper Foil (6-12?m) market size was estimated at USD 4234.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.70% during the forecast period.
