Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Supercapacitor Carbon competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Supercapacitor Carbon is a premium activated carbon grade which is purified to reduce ash below 1% and to reduce halogen and iron impurities below 100 ppm to enable extended cycling. Kuraray supplies most of this product. The homology of activated carbon - supercapacitor carbon - hard carbon: the front-end processes of the three are the same, and they all require the process of primary carbonization. There are only slight differences in the refining after preliminary carbonization, back-end processing, hole making, etc. In 2024, global Supercapacitor Carbon sales reached approximately 7,812 tons, with an average global market price of around US\$ 19.49 per kg. The single-line production capacity is about 200-300 tons, and the industry gross profit margin is about 30%. The global core manufacturers of Supercapacitor Carbon include Kuraray, Power Carbon Technology and Haycarb. The top three companies have a market share of about 67%. The Asia-Pacific region is the world's largest Supercapacitor Carbon market with a market share of about 64%, followed by North America and Europe with a market share of 18% and 11%, respectively. In terms of product type, 1500-1900 m²/g is the largest segment, accounting for approximately 59% of the market share. In terms of application, Electric Double-layer Capacitors (EDLCs) is the largest downstream segment, accounting for about 93% of the market share.

The global Supercapacitor Carbon market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
