## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Supercapacitor Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. This report mainly studies Supercapacitor Carbon Materials. Supercapacitor Carbon is a premium activated carbon grade which is purified to reduce ash below 1% and to reduce halogen and iron impurities below 100 ppm to enable extended cycling. Kuraray supplies most of this product. The homology of activated carbon - supercapacitor carbon - hard carbon: the front-end processes of the three are the same, and they all require the process of primary carbonization. There are only slight differences in the refining after preliminary carbonization, back-end processing, hole making, etc. In 2024, global Supercapacitor Materials sales reached approximately 7,812 tons, with an average global market price of around US\$ 19.49 per kg. The single-line production capacity is about 200-300 tons, and the industry gross profit margin is about 30%. The leading companies in the global supercapacitor material market include Kuraray and Power Carbon Technology. Among them, Kuraray, as the industry leader, occupies more than 36% of the market. Today, almost all supercapacitor manufacturers use coconut shell activated carbon as active materials. The application of supercapacitor materials mainly includes electric double layer capacitors (EDLC) and lithium electronic capacitors (LIC)/hybrid capacitors. The market growth of supercapacitor materials is affected by the supercapacitor market. With the increase in demand for fast charging and high-power applications, supercapacitors have become an effective alternative to traditional batteries, driving the demand for related materials. In addition, the popularity of electric vehicles and other electric vehicles has driven the demand for supercapacitors, thereby driving the growth of the material market.

The global Supercapacitor Materials market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Supercapacitor Materials market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
