Report Overview

Supercritical staining disperse dyes are a type of dye that are used to color materials such as textiles, plastics, and fibers. These dyes are created using a supercritical fluid, which is a substance that is heated and pressurized until it reaches a state where it has properties of both a liquid and a gas. This unique state allows the supercritical fluid to dissolve the dye and penetrate the material being colored more effectively than traditional dyeing methods.

The global Supercritical Staining Disperse Dye market size was estimated at USD 185.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
