Abstracts

Superfine steel powder, also known as ultrafine steel powder or atomized steel powder, refers to finely divided metallic particles typically produced through processes like gas or water atomization, where molten steel is disintegrated into micro-scale or nano-scale spherical or near-spherical particles with particle sizes generally ranging from 1 to 150 micrometers, though advanced variants can achieve sub-micron dimensions; these powders exhibit high purity, controlled size distribution, excellent flowability, and enhanced sintering properties, making them critical raw materials in specialized applications such as metal injection molding (MIM), additive manufacturing (3D printing), powder metallurgy for high-strength components, surface coating, magnetic composites, and specialized welding or brazing alloys, where precise material properties and microstructural control are essential.

The global Superfine Steel Powder market size was estimated at USD 1180.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
