Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Superior Modular Floating Docks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of superior modular floating docks will reach approximately 35,500 units, with an average price of approximately US\$16,000. This floating dock is a flexible berthing and loading and unloading platform composed of standardized modular units. It can be quickly assembled and expanded to meet the diverse needs of ships, floating facilities, offshore engineering equipment, or inland river terminals. It is widely used in port logistics, military docks, yacht docks, and temporary water engineering projects. Its core advantage lies in the modular units' high-strength buoyancy structure, corrosion-resistant surface treatment, and quick-lock docking mechanism, which can significantly reduce the construction cycle and cost of traditional fixed docks while improving the mobility and adaptability of transportation and operations. With the global development of offshore wind power, marine engineering, and the yacht leisure economy, superior modular floating docks are gradually replacing traditional fixed facilities and becoming a key growth point in the port and shipping infrastructure market. Increase in offshore and offshore activities for commercial, recreational, development, and adventure purposes is likely to boost the growth of the floating dock market. Floating docks also provide safety and accessibility, important qualities expected to propel the floating dock industry forward. Moreover, new government defense efforts such as construction of floating docks for submarines and warships are likely to aid the growth of the market. The biggest hurdle expected to restrain the market expansion during the forecast period is government regulations to protect marine ecology. Manufacturers must obtain approval before commencing construction and installation of floating docks to avoid damage to aquatic and marine

systems. New projects by various governments have the potential to propel the floating dock market forward during the forecast period.

The global Superior Modular Floating Docks market size was estimated at USD 568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
