Abstracts

A superluminescent source (SLS), also called a superluminescent diode (SLD) or superluminescent light-emitting diode (SLED), is an optoelectronic device that generates broadband, high-power, and spatially coherent light through amplified spontaneous emission. Functioning as an intermediate between laser diodes and light-emitting diodes, it combines the high output power and brightness of lasers with the low temporal coherence and broad spectral bandwidth of LEDs, making it especially valuable in applications like optical coherence tomography (OCT), fiber optic gyroscopes, fiber sensors, and test and measurement equipment where short coherence length and minimal speckle are critical.

The global Superluminescent Source market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
