## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Supermalloy Rods competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Supermalloy rods are cylindrical components made from Supermalloy, a highly permeable soft magnetic alloy composed primarily of nickel (typically around 79%), iron (approximately 16%), and molybdenum (around 5%). These rods are engineered for applications requiring minimal magnetic hysteresis loss, extremely high magnetic permeability, and low coercivity. Due to their excellent magnetic properties, Supermalloy rods are used in high-performance magnetic shielding, magnetic core assemblies, and precision electronic instruments such as transformers, inductors, magnetic sensors, and magnetic amplifiers. They are commonly found in industries such as aerospace, telecommunications, instrumentation, and defense, where magnetic field control and precision signal processing are critical.

The global Supermalloy Rods market size was estimated at USD 58.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
