## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Supermalloy Sheets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Supermalloy sheets are thin, flat forms of a high-permeability nickel-iron-molybdenum alloy (typically 79% Ni, 16% Fe, 5% Mo) designed for applications requiring exceptional magnetic performance. These sheets exhibit extremely high magnetic permeability, low coercivity, and minimal core losses, making them ideal for use in transformer cores, magnetic shielding, precision inductors, and sensitive current sensors. Typically manufactured through cold rolling and hydrogen annealing, Supermalloy sheets are used in low-frequency electromagnetic applications where efficient magnetic flux conduction and noise suppression are critical. They are available in various thicknesses, generally between 0.1 mm and 1 mm.

The global Supermalloy Sheets market size was estimated at USD 68.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
