Report Overview

Supplied-air respirators (SARs) are personal protective equipment devices that provide clean and breathable air to the user from a stationary source. SARs are commonly used in environments where the air quality is compromised, such as in industrial settings where there may be exposure to harmful chemicals, gases, or particulates. These respirators consist of a facepiece or helmet, a hose for air supply, and a source of clean air, which can be a compressor or a cylinder of compressed air. SARs are designed to protect the respiratory system of the wearer by ensuring that they are not inhaling any contaminants present in the ambient air.
