Suppression capacitors, also known as EMI/RFI suppression capacitors or X/Y-class capacitors, are specialized passive electronic components designed to filter and attenuate electromagnetic interference (EMI) and radio frequency interference (RFI) in electrical circuits, thereby ensuring compliance with international electromagnetic compatibility (EMC) standards. These capacitors are engineered to withstand high-voltage transients and are categorized based on safety requirements: X-class capacitors are connected between line and neutral to suppress differential mode noise, while Y-class capacitors are placed between line and ground or neutral and ground to mitigate common mode noise, with both types constructed to fail safely?either open circuit or short circuit?to prevent risks such as electric shock or fire in end applications ranging from power supplies and motor drives to consumer electronics and automotive systems.
