Report Overview

The surface acoustic wave touch screen consists of a touch screen, a sound wave generator, a reflector and a sound wave receiver. The sound wave generator can send a high-frequency sound wave across the screen surface. When a finger touches the screen, the sound wave on the contact is blocked. This determines the coordinate position. The surface acoustic wave touch screen is not affected by environmental factors such as temperature and humidity. It has a high resolution, excellent scratch resistance, long life (50 million times without failure); high light transmittance (92%), and can maintain a clear and bright Image quality; no drift, only need to be corrected once during installation; there is a third axis (ie pressure axis) response, which is most suitable for use in public places.
