## Abstracts

A surface broaching machine is a precision equipment that uses a broach to cut the surface of a workpiece. It can complete the efficient flattening of the workpiece surface in one stroke. Its unique structural design features a high degree of automation, good processing accuracy, and easy operation, and can meet the processing needs of workpieces of various hardness and materials. The superiority of a plane broaching machine is reflected in its processing efficiency. Due to the continuous broaching method, a large number of workpieces can be processed in a short time, while ensuring the smoothness and flatness of the processed surface and reducing the subsequent surface treatment steps. In addition, plane broaching machines are usually equipped with advanced control systems that can achieve accurate processing parameter settings and ensure the consistency of processing quality, thereby improving the automation level and production efficiency of the entire production process.

The global Surface Broaching Machine market size was estimated at USD 306.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
