Abstracts

The surface defect inspection system (magic mirror principle) is an advanced detection device. It applies the long-standing and proven magic mirror principle, and can monitor and analyze the surface state of the mirror flat substrate in real time. It is widely used by silicon wafer factories around the world to ensure product quality. The equipment adopts a non-contact, non-destructive detection method, with a maintenance-free optical system. It can be equipped with advanced functions such as automatic judgment image processing software as needed, realizing a fully automated process from defect detection to data management. Using the magic mirror principle, the equipment can detect and analyze tiny defects on the wafer mirror sample that cannot be identified by the naked eye, and determine the type, location and size of the defects by contrasting light and dark, so as to accurately detect various abnormalities on the wafer surface, such as dimples, bumps, grinding marks, grinding marks, slip lines, edge defects, warping, deformation, etc., providing efficient and accurate quality control means for silicon wafer production.

The global Surface Defect Inspection System (Magic Mirror) market size was estimated at USD 349.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
