Surface inspection equipment provides an automated approach to inspection for inclusions, foreign bodies, surface defects, cracks, fibres and missing materials across all industries. Surface inspection equipment has a wide range of applications in the semiconductor industry and manufacturing. In the manufacturing industry, surface inspection equipment is mainly used in several aspects: Surface defect detection: In the manufacturing industry, surface inspection equipment is used to detect defects, scratches, cracks and other problems on the surface of products. This helps to eliminate defective products and improve product quality and reliability. Coating quality inspection: Surface inspection equipment is used to detect parameters such as coating uniformity, thickness, adhesion and quality. They can help ensure coating consistency and prevent problems caused by coating defects such as corrosion, reduced wear resistance, etc. Surface cleanliness detection: Surface detection equipment can be used to detect surface cleanliness during the manufacturing process to ensure that there are no residual pollutants, grease, dust, etc. on the product surface, thereby ensuring product quality. Part size measurement: In the manufacturing process, surface inspection equipment can be used to measure the size, flatness, roundness and other parameters of parts. This helps verify that the geometry of the part meets specification. Global 5 largest manufacturers of Surface Inspection Equipment are AMETEK, Nordson, Vitronic GmbH, Omron and IMS Messsysteme GmbH, which make up over 32%.
