Abstracts

Surface mount adhesives (SMAs) are specialized formulations used in electronics manufacturing to temporarily secure surface mount components to printed circuit boards (PCBs) prior to soldering, preventing component displacement during reflow or wave soldering processes. These adhesives are typically applied in precise dots or patterns using automated dispensing equipment and must exhibit properties such as rapid curing (often via UV or thermal methods), high thermal stability to withstand soldering temperatures, strong initial tack to hold components firmly, and minimal ionic content to prevent electrical interference or corrosion. Available in various chemistries including epoxies, acrylics, and cyanoacrylates, SMAs are engineered to provide reliable mechanical bonding without compromising solder joint integrity or subsequent cleaning processes, making them critical for ensuring assembly accuracy and yield in high-speed, high-volume electronics production.

The global Surface Mount Adhesives market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
