Report Overview

Surface Mount Device Shielded Power Inductor (Surface Mount Device Shielded Power Inductor) is an inductor manufactured using surface mount technology (SMD technology), which has shielding function and power handling capability. This kind of inductor usually consists of magnetic material and wire, in the form of laminated, wire wound or planar coil, and is mounted on the surface of the circuit board by surface mount technology without the need for connection through leads. It is characterized by small size, easy installation, suitable for high-density circuit board design, high power handling capability and good EMI (electromagnetic interference) shielding performance. Surface mount shielded power inductors are commonly used in power electronics, communication equipment, automotive electronics, industrial control, household appliances and other fields. They are often used in applications such as filtering, voltage stabilization, isolation, and EMI suppression to ensure stable operation and electromagnetic compatibility of circuit systems. According to specific specifications and performance requirements, surface mount shielded power inductors can have different inductance values, current capacities, frequency characteristics, and shielding effects, etc.
