Report Overview

Surface Mount FPGA is an integrated circuit chip, which is usually used to realize the design and implementation of digital circuits. FPGAs can be reprogrammed at design time, providing a high degree of customizability and flexibility. Surface mount means that these chips can be soldered directly to the surface of a printed circuit board (PCB) without being inserted into a socket. This makes them easier to integrate into the board's design and reduces board size and weight. Package types commonly used in surface mount FPGAs are QFN, BGA, LGA, etc.
