Report Overview

A surface mount low dropout voltage regulator is an electronic component that is mounted on the surface of a circuit board using surface mount technology to provide a stable voltage. Unlike through-hole mounting, surface-mount low-dropout regulators do not require through-holes to connect different layers of the board, thus saving more space and increasing the density of the board. Surface mount low dropout voltage regulators are usually available in small form factor designs that provide high efficiency and high precision voltage regulation. These components typically have a small input and output voltage difference, typically less than 0.5 volts. Surface mount low dropout voltage regulators are widely used in consumer electronics such as mobile phones, tablets, laptops, digital cameras, etc. to provide stable power.

The global Surface Mount Low Dropout Regulators market size was estimated at USD 1268.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
