Abstracts

Surface mount oscillators are compact, quartz-based electronic components that generate precise clock signals for timing and synchronization in electronic circuits, designed for automated assembly onto printed circuit boards (PCBs) using surface-mount technology (SMT). These oscillators offer advantages such as reduced size, improved reliability, higher frequency stability, and better performance in high-vibration environments compared to through-hole alternatives, making them essential in modern electronics where miniaturization, efficiency, and signal integrity are critical. They are characterized by parameters including frequency range, stability, supply voltage, output type (e.g., HCMOS, LVDS), and package size (e.g., 2.0x1.6mm, 3.2x2.5mm), and are widely used in applications ranging from consumer electronics and telecommunications to industrial automation, automotive systems, and medical devices.

The global Surface Mount Oscillator market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
