Abstracts

Thermopiles are designed to measure temperature from a distance by detecting an object's infrared (IR) energy. The higher the temperature, the more IR energy is emitted. The thermopile sensing element, composed of small thermocouples on a silicon chip, absorb the energy and produce an output signal. A reference sensor is designed into the package as a reference for compensation. Thermopile infrared (IR) non-contact temperature measurement sensors are available with various lens, and filters allowing use in multiple applications, from industrial pyrometers, to climate controls and medical devices. SMD package offers many advantages for high-volume manufacturing in cutting-edge sensing applications.

The global Surface Mount Thermopile Infrared Sensor market size was estimated at USD 328.28 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
