## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Surface Mounted Bollard competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Surface Mounted Bollard production reached approximately 32.2 million units, with an average global market price of around US\$ 56 per unit. Surface Mounted Bollard, also known as a bolt-down bollard, is a type of safety and security post that is anchored to a concrete or solid surface using anchor bolts rather than being embedded into the ground. Typically made from durable materials such as steel or stainless steel, these bollards are designed to provide a physical and visual barrier without requiring excavation. Surface mounted bollards are commonly used in locations where core drilling or trenching is impractical, such as on suspended slabs, finished floors, or areas with underlying utility lines. They serve a wide range of purposes, including controlling vehicle access, protecting assets, guiding pedestrian traffic, and enhancing perimeter security. Depending on their construction and installation, they may offer varying degrees of impact resistance, from light-duty delineation to moderate protection from accidental vehicle contact.

The global Surface Mounted Bollard market size was estimated at USD 1805.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
