Report Overview

Schottky diodes, also known as SBDs, are low-power, ultra-high speed semiconductor devices. The most striking feature is the extremely short reverse recovery time (which can be as small as a few nanoseconds) and the forward on-going pressure drop of only about 0.4 v. Many of them are used as high-frequency, low-voltage, large current rectifying diodes, continuous flow diodes, protective diodes, and are also useful in circuits such as microwave communication as rectifying diodes, small signal retinoscopy diodes. It is relatively common in communication power supply, frequency converter and so on.
