Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Surface Mounted Steel Bollard competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Surface Mounted Steel Bollard production reached approximately 19,700 k units with an average global market price of around US\$ 60 per unit, a single-line production capacity of approximately 500,000 units/year, and a gross profit margin of approximately 10%-30%. Surface Mounted Steel Bollard is a type of protective post designed to control vehicle access, enhance pedestrian safety, and protect property or infrastructure from accidental or intentional impact. Unlike embedded bollards that are installed below ground, surface-mounted steel bollards are fixed directly onto the surface using base plates and anchor bolts, allowing for quick installation on existing concrete or asphalt surfaces without extensive excavation. Constructed from high-strength steel, these bollards offer robust durability and resistance to impact, corrosion, and weathering, making them suitable for both indoor and outdoor environments.

The global Surface Mounted Steel Bollard market size was estimated at USD 1180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
