Abstracts

Surface sanitizing agents are chemical formulations designed to eliminate or reduce microbial contaminants on inanimate surfaces, targeting bacteria, viruses, fungi, and other pathogens to prevent cross-contamination and disease transmission. These agents are distinct from disinfectants and sterilants in terms of efficacy levels, contact times, and regulatory classifications, with common active ingredients including quaternary ammonium compounds, alcohols, hydrogen peroxide, and sodium hypochlorite. Their applications span healthcare, food service, hospitality, residential, and public transportation sectors, where they are employed on high-touch surfaces such as countertops, door handles, medical equipment, and food preparation areas. The effectiveness of these products is governed by standards set by agencies like the EPA in the United States and the European Chemicals Agency (ECHA) in the EU, which mandate specific kill claims against pathogens and require proper labeling regarding usage instructions and safety precautions.

The global Surface Sanitizing Agents market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
