Report Overview

Surface tension meter is a professional measuring instrument used to measure the surface tension value of liquids. Through the principles of platinum plate method, platinum ring method, maximum bubble method, suspension drop method, droplet volume method, and droplet weight method, it can accurately measure the surface tension value of liquids. At the same time, using software technology, the surface tension value that changes over time can be measured. The surface tension meter, also known as the interface tension meter, can measure both interface tension and surface tension. The surface tension meter is an instrument specifically developed for the development and high-precision control needs of a large number of users in the process of interface chemical testing. The instrument is easy to operate and has accurate measurement values.
