### Report Overview

Surface-to-air missile (SAM) or Ground-to-air missile (GTAM) is a missile launched from ground position to intercept and destroy enemy aircraft or missiles. It has excellent acceleration that is usually guided by radar or infrared. Radar is one of the major components of surface-to-air missile that helps in tracking and guiding the tracks. Rising development of man-portable air-defense systems (MANPADS) is one of the primary drivers for market growth. The requirement for MANPADS has grown significantly over the years and is being used largely by soldiers on the ground take down low-flying enemy aircraft. The attacking abilities deployed for bombing or strafing, surveillance, gathering information, and resupplying enemy troops drives the growth of the MANPADS. Moreover, taking down the enemy's aircraft is an effectual way to lower enemy tactics. This has resulted in substantial improvements to raise their stealth and destructive power with the demand for MANPADS.
