Report Overview:

A surge protective device (SPD) is a protective device for limiting transient voltages by diverting or limiting surge current and is capable of repeating these functions as specified. Surge Protective Devices are designed to protect against transient surge conditions. Large single surge events, such as lightning, can reach hundreds of thousands of volts and can cause immediate or intermittent equipment failure. However, lightning and utility power anomalies only account for 20% of transient surges. The remaining 80% of surge activity is produced internally. Although these surges may be smaller in magnitude, they occur more frequently and with continuous exposure can degrade sensitive electronic equipment within the facility.

The Global Surge Protection Devices (SPDs) Market Size was estimated at USD 2387.48 million in 2023 and is projected to reach USD 2610.57 million by 2029, exhibiting a CAGR of 1.50% during the forecast period.
