Abstracts

Surge protective devices (SPDs), also known as surge suppressors or transient voltage surge suppressors (TVSS), are electrical safety devices designed to protect electrical equipment from voltage spikes or transient overvoltages caused by lightning strikes, power grid switching, or electrostatic discharges by limiting the voltage supplied to an electric device by either blocking or shorting to ground any unwanted voltages above a safe threshold. These devices are critical components in both residential, commercial, and industrial settings to safeguard sensitive electronics, prevent data loss, reduce equipment downtime, and mitigate fire hazards, with classifications ranging from Type 1 (for external surges like lightning) to Type 3 (point-of-use protection for specific appliances). The market encompasses a wide range of products including plug-in strips, hardwired panels, and modular devices, driven by the increasing reliance on electronic systems, growing awareness of power quality issues, and stricter regulatory standards for electrical safety across various regions.

The global Surge Protective Devices market size was estimated at USD 4145.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
