Abstracts

Surge suppressor diodes, also known as transient voltage suppressor (TVS) diodes, are semiconductor devices designed to protect sensitive electronic circuits from voltage spikes and transient overvoltage events by rapidly clamping excessive voltage to a safe level and diverting surge current away from critical components. These devices operate by transitioning from a high-impedance state to a low-impedance state almost instantaneously when the voltage exceeds a predefined breakdown threshold, effectively absorbing and dissipating transient energy to prevent damage to integrated circuits, power supplies, communication lines, and other electronic systems. Characterized by their fast response time, high surge handling capability, and precise clamping voltage, surge suppressor diodes are integral components in applications ranging from consumer electronics and automotive systems to industrial equipment and telecommunications infrastructure, providing essential protection against electrostatic discharge (ESD), lightning-induced surges, and switching transients.

The global Surge Suppressor Diodes market size was estimated at USD 1206.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
