## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Surgical Absorbent Pads competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Surgical Absorbent Pads are disposable medical consumables used in surgical operations. Their main function is to absorb blood, body fluids, tissue fluids and other liquids produced during the operation, while keeping the surgical area dry and clean, providing a clear field of view for surgical operations and reducing the risk of infection. Surgical absorbent pads are usually made of highly hygroscopic materials, such as cotton wool, non-woven fabrics, cellulose fibers, etc. Some products are also combined with a guide layer or an anti-leakage layer to enhance the absorption capacity and prevent liquid back-seepage. They come in a variety of sizes and shapes and can be selected according to the type of surgery (such as general surgery, orthopedics, obstetrics and gynecology, etc.) and the needs of the surgical site. They can be used to cover the tissue around the surgical incision, or they can be placed near the surgical field of view to receive liquids. With the development of material science, more and more new materials are applied to Surgical Absorbent Pads. For example, materials with better water - absorption, breathability, and antibacterial properties are widely used, which can improve the performance of the pads, reduce the risk of infection, and provide a more comfortable experience for patients. In addition to the traditional application in the operating room, the application scenarios of Surgical Absorbent Pads are constantly expanding. The demand for Surgical Absorbent Pads in minimally - invasive surgery pads and day - surgery center pads is increasing.

The global Surgical Absorbent Pads market size was estimated at USD 2815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30%

during the forecast period.
