Report Overview

Surgical Aortic Valve Replacement (SAVR) is a medical procedure used to treat aortic valve disease by replacing a damaged or diseased aortic valve with a mechanical or biological valve. The procedure involves open-heart surgery and is typically recommended for patients with severe aortic stenosis or regurgitation who are deemed suitable candidates for surgery. SAVR is considered a standard treatment option and has been performed for decades with proven efficacy in improving patient outcomes and quality of life. The market for SAVR includes medical devices such as heart valves, surgical instruments, and related equipment, as well as the services provided by healthcare facilities and professionals involved in performing the procedure.

The market for Surgical Aortic Valve Replacement is driven by several key factors.
