Surgical gauze dressings are a type of medical dressing used for surgical operations, trauma care, and wound protection. They are primarily made of medical cotton yarn or sterilized fibers and have excellent moisture absorption, breathability, and softness. They can effectively absorb exudate, protect the wound surface, prevent infection, and reduce friction and irritation during surgery or wound care. They are commonly used in scenarios such as covering surgical incisions, bandaging trauma, assisting in hemostasis, and fixing after applying medication. Depending on the needs, surgical gauze dressings can be in sheet form, roll form, gasket form, or modified dressings with special features such as antibacterial treatment, liquid-permeable layers, and adhesives. Modern surgical dressings also emphasize sterile packaging, ease of operation, and compatibility with human skin to improve safety of use and efficiency of care.
