### Report Overview

Medical nonwovens are either made up of natural fiber-like cotton, linen, or of synthetic materials such as polypropylene, polyester, polytetrafluoroethylene (PTFE), and others. The medical nonwoven disposables are commonly used in surgical processes, serving as a barrier to microorganisms and prevents cross contamination.

Owing to factors such as the rises in aging population, the increase in diseases, and the growing number of accidents, the demand for surgeries is witnessing a considerable increase. Technavio's market study has identified the increasing volume of surgeries as one of the primary factors that will fuel the growth of the surgical and nonwoven disposable market. According to the CDC, more than 28 million people visited the emergency departments due to accidents in the US during 2013. Since surgical and nonwoven disposables are used when treating people during surgeries, the rising volume of surgeries will have a significant impact on this market's growth.
