Report Overview

Surgical protective face masks are made for lower risk medical situations, and are designed to stop the spread of germs from the wearer. Because of their loose fit to the face, matter can get around the edges of the mask and still enter the nose and mouth, so they do not provide the same level of protection as an N95. Additionally, the filtering pores in the mask aren't small enough to stop viruses. However, these masks do protect against spray, large droplets, and splashes, and they keep the wearer's germs from spreading to other people.
