Report Overview

Surgical sheets, also known as surgical drapes, are sterile fabrics or disposable materials used in medical settings to create a barrier between the surgical site and non-sterile areas, preventing contamination and infection during procedures. These sheets are designed with features such as fluid resistance, absorbency, and durability to maintain a sterile field while accommodating various surgical needs. They come in different types, including reusable woven fabrics (like cotton or polyester) and single-use nonwoven materials (such as polypropylene or SMS), often incorporating adhesive fenestrations or reinforcement layers for specific surgical applications. The demand for surgical sheets is driven by stringent hospital hygiene protocols, rising surgical volumes, and increasing awareness of healthcare-associated infections (HAIs), with advancements focusing on eco-friendly disposables and antimicrobial coatings to enhance safety and sustainability.
