Abstracts

A Surgical Sponge Counting Detection System is a specialized technology designed to enhance patient safety during surgical procedures by preventing retained surgical items (RSIs), particularly sponges, from being left inside the patient. Retained surgical items can lead to severe complications, such as infections, additional surgeries, prolonged recovery, and even legal consequences. Traditional manual counting methods are prone to human error, which is why automated or semi-automated sponge detection systems are gaining popularity in healthcare settings. These systems use advanced technologies, such as Radio Frequency Identification (RFID), barcodes, or imaging systems, to accurately track and count sponges during surgery, significantly reducing the risk of human error and improving the overall safety and reliability of surgical procedures.
