Abstracts

Surgical Sponges and Gauze is a specialized sponge or pad used in surgery. Surgical sponge is used to absorb liquids from a surgical site. It may be used in combination with suction to keep a surgical site clear, by a surgeon working to control bleeding, and in a number of other applications. Like other things used in surgery, sponges are designed to be sterile; they come in their own sterile packaging and can be safely autoclaved. They are generally disposable and discarded after surgery in biohazard containers which hold other disposable surgical instruments and equipment. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. Surgical sponges and gauze play an indispensable role in the field of healthcare. With the continuous advancement of global medical technology, there is a steady increase in demand for high-quality surgical sponges and gauze. These products are used in surgeries to absorb blood and other bodily fluids, maintain cleanliness in the surgical area, and reduce the risk of infection. As the number and complexity of surgeries continue to rise, so do the requirements for the quality and performance of healthcare materials. Consequently, manufacturers are constantly striving to innovate and develop sponges and gauze that are more absorbent, durable, and compliant with hygiene standards to meet the growing demands of the market.

The global Surgical Sponges and Gauze market size was estimated at USD 542.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
